

# Install Trust Wallet

1. On your mobile device open the Apple store or Play store and search for Trust Wallet. Ensure you have the correct application by checking for the blue shield and confirmation it is the official Binance wallet.

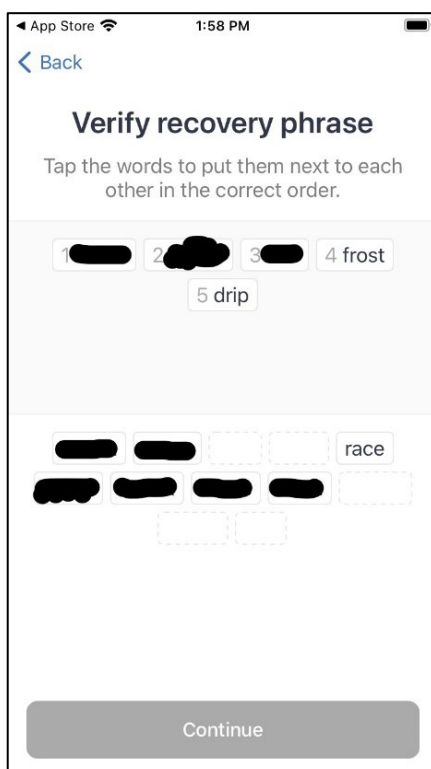

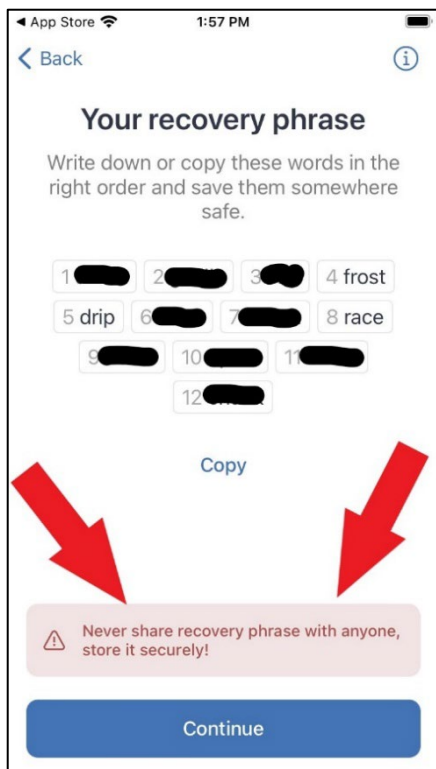

2. Install the application.
3. Once installed open the Trust Wallet application.
4. Tap **Create a new wallet**, read the Privacy Policy and Terms of service, then click **Accept** and **Continue**. Next, back up your wallet up by tapping **Continue**.

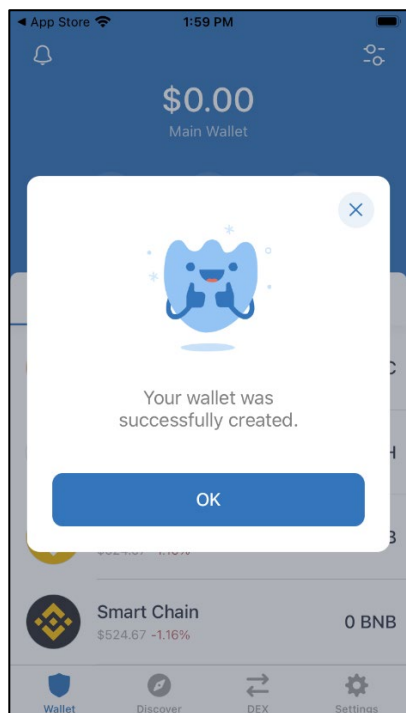

5. Write down your 12-word pass phrase in order, click **Continue**, then repeat them (you can only progress if you repeat them in the correct order).

You must retain your 12-word pass phrase! You will not be able to recreate your wallet and risk losing the crypto within them. There is information around best practice for saving your words [here](#).

6. Congratulations, your wallet has now been created!

Note: To improve security of your crypto assets you are advised to set a PIN code on the wallet. This is done by tapping the settings cog (bottom right) and then security. Do not forget your 6-digit PIN code!
