Your PFT trap

WHO WE ARE

We are a charity making pest eradication easy.

We **build traps** and fund local pest eradication initiatives.

This is made possible by **trap sales, donations,** and our own **cryptocurrency** – Pest Free Token (PFT). Visit our website to learn more.

Our YouTube channel has lots of information on setting your trap, where to place it, how to deal with a catch, and how to log a catch.

SAFETY FIRST

Misplaced fingers hurt. These tips will help:

- Only hold the trap from the back
- Bait the trap before you set it
- Place the trap at the back of the trapbox
- Keep your fingers away when set
- Shake trapbox to disable the trap
- Wear gloves and dispose of catch in the bin.

SETTING YOUR TRAP

1 Move the arm bar to the back of the trap.

2 Bait the trap with a high-protein substance.

3 Pull the kill bar back and hold it in place.

4 Swing the arm bar over the kill bar and latch the bent end of the arm bar into the notch on the metal pedal.

PLACEMENT AND BAIT

Trapboxes do well on flat surfaces near compost bins, along walls, or under cover where rats lurk. Fatty bait works well, eg peanut butter, cheese, and even chocolate if you're willing to share it!

LOG YOUR CATCHES TO EARN TOKENS*
